

# NERC Current Standards

Your operators need continuing education to perform their jobs well, maintain their certification, and keep the grid reliable. The NERC Current Standards training program helps you meet this need with up-to-date training on the standards that System Operators deal with every day.

Through this group of courses, your operators will reinforce their ability to apply information from these standards to improve their job performance. Using a systematic approach to training and the latest in adult learning theory, we provide a range of NERC continuing education courses to meet your training needs.

Because these courses are designed to keep system operators up to date on standards that apply to them, we update our material as the standards change - making sure your operators have the most recent information.

This program and all its modules are available online 24/7, so you can access and complete your training at your convenience.

SOS reports earned CEHs to the NERC SOCCED database and all Operating Standards CEHs count toward the 30 Standard CEH minimum requirements for credential maintenance. If you are a licensed engineer, your CEHs may apply toward your PE continuing education requirements.
